EXECUTIVE SUMMARY

The 2023 Ghana Forest Plantation Strategy (GFPS) Annual Report highlights the nation's continued efforts toward forest landscape restoration through its three strategic interventions: forest plantation development, enrichment planting, and farm forestry (trees-on-farm).

These interventions align with Ghana's commitment to international frameworks such as the Sustainable Development Goals (SDGs), the Bonn Challenge, and the Paris Climate Agreement. The interventions being undertaken under the GFPS contribute to addressing the existing timber supply shortage, promoting food security, and creating economic opportunities for rural communities. Simultaneously, these interventions open avenues for the country to engage in carbon and ecosystem services markets.

During the reporting year, a total of **16,941.5 ha** of forest plantations was established, comprising **12,613.4 ha** by the public sector under the National Afforestation/Reforestation Programme (NAP) and **4,328.1 ha** through private sector initiatives. Out of this total, **16,732.3 ha** (98.7%) was established in forest reserves, and **209.2 ha** (1.3%) established within off-reserve lands. This, however, fell short of the 18,600 ha revised annual target due to the reduction in the number of beneficiaries under the Youth in Afforestation/Reforestation Project (YAP), private sector under-performance and logistical constraints.

The enrichment planting component targeted poorly-stocked and degraded forest reserves to restore ecological integrity using high-value indigenous tree species. In 2023, an area of **2,387.3 ha**

of enrichment planting was undertaken, exceeding the initial target of 1,200 ha. Additionally, under the trees-on-farm (farm forestry) component, 651,638 timber tree seedlings were distributed to farmers for integration into an estimated area of **24,071.6 ha** of farm lands. The enrichment planting component was implemented under the Ghana Landscape Restoration and Small-Scale Mining Project (GLRSSMP), YAP and the Green Ghana Day Initiative.

The third edition of the Green Ghana Day (GGD) Initiative was commemorated on 9th June, 2023 under the theme "Our Forests, Our Health" with a target of planting 10 million tree seedlings on the Day. A total of **11,515,108 seedlings** was distributed nationwide representing 115% of the set target.

A post-planting verification exercise confirmed that **10,704,897 seedlings** were successfully planted, out of the total distributed seedlings. The seedlings planted included timber, fruit, ornamental, shade, and multipurpose trees. Strategic partnerships were forged with key stakeholders from traditional authorities, government agencies, corporate entities, educational institutions, and religious organizations among others, to ensure the successful implementation of the GGD activities.

Cumulatively, 41.4 million tree seedlings were planted during the reporting year. The major tree species planted during the year included Teak (*Tectona grandis*), Cedrela (*Cedrela odorata*), Eucalyptus spp., Gmelina (*Gmelina arborea*), Ofram and Emire (*Terminalia spp.*), African Mahogany (*Khaya ivorensis/senegalensis*), and Bamboo spp.

EXECUTIVE SUMMARY

A total of 48,460.6 tonnes (t) of food crops was harvested within forest plantations, representing a 29% decrease compared to the previous year's achievement.

The majority of these harvests occurred under the Modified Taungya System (MTS). The harvested food crops comprised cereals (8,053.5 t), plantain (25,204.2 t), tubers (13,478.2 t), vegetables (815 t), and legumes (909.8 t).

The proportion of plantation timber exports compared to total timber exports continued its upward trajectory during the reporting year. A total volume of 183,717 m³ of forest plantation timber was exported out of the overall volume of 293,284 m³ of timber exports for the year. The exported plantation timber products included lumber, billets, plywood, kindling, and logs.

This accounted for 63% of the total volume of timber and wood products exported from Ghana during the period, representing a 2-percentage-point increase from the 2022 figure. The value of the exported plantation timber amounted to €68,809,415.56, constituting 51% of the total timber export value, which stood at €134,434,671.84.

A total of **80,887** individuals were engaged in various forest landscape restoration activities, comprising 48,809 (60%) males and 32,078 (40%) females. Employment opportunities were primarily generated through activities such as forest plantation establishment and maintenance, enrichment planting, and contract seedling production.

Despite these successes, challenges such as wildfires particularly in forest reserves across the transition and northern savannah zones, illegal mining, and limited funding for field operations continue to hinder progress. Addressing these issues will be critical to achieving future targets.

The GFPS continues to serve as a robust framework for restoring Ghana's degraded forest landscapes while delivering economic, environmental, and social benefits. Strategic partnerships, increased investment in plantation management, and stronger legal and governance mechanisms remain key priorities for the successful implementation of the GFPS in the coming years.

ACHIEVEMENTS AT A GLANCE

| CATEGORY | ANNUAL TARGET | 2023 ACHIEVEMENT |
|---|---------------|------------------|
| Plantation Establishment On & Off Reserve (ha) | 18,600.0 | 16,941.5 |
| Plantation Maintenance On & Off Reserve (ha) | 50,775.0 | 50,600.9 |
| Enrichment Planting (ha) | 1,200.0 | 2,387.3 |
| Farm Forestry/Trees-On-Farm (No. of seedlings) | 5,000,000 | 651,638 |
| Green Ghana Day (No. of seedlings) | 10,000,000 | 10,704,897 |
| Number of Tree Seedlings Planted | Variable | 41,434,894 |
| Plantation Timber Harvested On & Off Reserve (m ³) | 250,000.0 | 285,188.9 |
| Food Crop Production (tonnes) | 25,000.0 | 48,460.6 |
| Jobs (No. of Person Engaged) | 62,500 | 80,887 |
| Amount disbursed to stakeholders (OASL, Landowners, MTS Groups, MMDA's etc) (GH¢) | Variable | 15,519,486.6 |

| YEAR | PLANTATION ESTABLISHMENT (ha) | ENRICHMENT PLANTING (ha) | TREES-ON-FARM | |
|--------------|-------------------------------|--------------------------|-------------------|------------------|
| | | | No. of seedlings | Est. Area (ha) |
| 2017 | 8,725.0 | 4,488.9 | 4,169,475 | 126,348.0 |
| 2018 | 19,605.9 | 4,724.6 | 3,417,098 | 103,549.0 |
| 2019 | 25,004.2 | 4,563.1 | 2,261,247 | 67,823.9 |
| 2020 | 19,171.4 | 3,115.6 | 5,010,261 | 150,307.8 |
| 2021 | 18,494.7 | 5,145.5 | 2,252,877 | 72,079.6 |
| 2022 | 27,910.5 | 1,322.6 | 1,466,926 | 43,160.9 |
| 2023 | 16,941.5 | 2,387.3 | 651,638 | 24,071.6 |
| TOTAL | 135,853.2 | 25,747.6 | 19,229,522 | 587,340.8 |

1.0 INTRODUCTION

For the past eight (8) years, the Forestry Commission, in line with the 2012 Ghana Forest and Wildlife Policy and the Ghana Forest Plantation Strategy (GFPS, 2016 - 2040) has embarked on forest restoration interventions through three main components namely, forest plantation development, enrichment planting and farm forestry (trees on farm). These are strategic interventions aimed at achieving a sustainable supply of plantation timber to satisfy the domestic and export markets while providing environmental benefits.

The GFPS serves as a blueprint for forest landscape restoration and is consistent with Ghana's Development Agenda, relevant national policies and our international commitments such as the Sustainable Development Goals (SDGs), the Bonn Challenge, New York Declaration on Forests, African Forest Landscape Restoration Initiative (AFR100), United Nations Strategic Plan for Forests and Paris Climate Agreement.

The overall goal of the GFPS is “to achieve sustainable supply of planted forest goods and services to deliver a range of economic, social and environmental benefits”, and is driven by five (5) strategic objectives as indicated below:

1. To provide a sustainable supply of timber and non-timber forest products and environmental services through the;
 - i. establishment and management of 625,000 ha of forest plantations and enrichment planting of 100,000 ha through the application of best practice principles by year 2040;

- ii. provision of support for the incorporation of trees within farming systems (farm forestry) covering 3.75 million hectares of agricultural landscapes, by year 2040;
- iii. maintenance and rehabilitation of an estimated 235,000 ha of existing forest plantations through the application of best practice principles.

2. To promote investments in the establishment and management of small, medium and large-scale forest plantations.
3. To create employment opportunities and sustainable livelihoods in rural communities through forest plantation development
4. To increase investments in research and development, extension, training and capacity building for forest plantation development, timber utilization and marketing
5. To improve governance in the regulation and management of forest plantations.

Cumulative area restored under the GFPS from 2017 to 2023 stands at **748,941.6 ha** as presented in Table 1. Specifically, the cumulative achievements to date under the three main components of forest restoration are: forest plantation **135,853.2 ha** (18.1%), enrichment planting **25,747.6 ha** (3.4%) and trees-on-farm constitutes **587,340.8 ha** (78.5%).

In 2023, **43,400.4 ha** of degraded forest landscape was restored, comprising 16,941.5 ha forest plantations, **2,387.3 ha** enrichment planting and **24,071.6 ha** trees-on-farm.

2.0 FOREST LANDSCAPE RESTORATION INTERVENTIONS

The planting and maintenance achievements under the three broad forest landscape restoration interventions in Ghana (forest plantation development, enrichment planting and trees-on-farm/farm forestry) are presented in this Section of the Report.

2.1 Forest Plantation Development

The GFPS prescribes an annual forest plantation establishment target of **25,000 ha**. However, the target has undergone series of fluctuations since 2020 primarily due to the impact of the COVID-19 pandemic and under-performance by the private sector. The target was revised downwards to 20,000 ha in 2020; 16,000 ha in 2021 and 20,000 ha in 2022. During the reporting year, the target was revised downwards to **18,600 ha**. The revision was mainly influenced by a significant reduction in the number of beneficiaries under the Youth in Afforestation/Reforestation Project (YAP) which hitherto served as an important initiative to aid in the attainment of the public sector target.

The revised target for the reporting year comprised a public sector target of **13,600 ha** to be established under the National Afforestation/Reforestation

Programme (NAP) and a private sector target of **5,000 ha**.

The annual targets for maintenance of established forest plantations and coppice management of harvested Teak stands were **50,775.0 ha** and **3,000 ha** respectively. The target of the third edition of the Green Ghana Day held on 9th June, 2023 was 10 million tree seedlings.

2.1.1 Forest Plantation Establishment Under Various Planting Components

The total area established during the reporting year was **16,941.5 ha**. As detailed in Table 2, both the public and private sectors were unable to achieve their respective annual planting target.

The predominant species planted during the year include *Tectona grandis* (Teak), *Cedrela odorata*, Eucalyptus (including hybrids), *Gmelina arborea*, *Terminalia superba* (Ofram), *Terminalia ivorensis* (Emire), *Senna siamea* (Cassia), Bamboo (*Bambusa vulgaris*, *Oxytenanthera abyssinica*), and *Khaya ivorensis/senegalensis* (African Mahogany).

Table 2: Targets and Achievements for Forest Plantation Development in 2023

| Component | Original GFPS Target (ha) | 2023 Target (ha) | Achievement (ha) |
|--------------------------|---------------------------|------------------|------------------|
| Public (NAP/ GGD) | 15,000 | 13,600 | 12,613.4 |
| Private (PPP On-Reserve) | 10,000 | 5,000 | 4,328.1 |
| Total | 25,000 | 18,600 | 16,941.5 |

The various forest plantations components (projects/programmes/initiatives) implemented during the reporting year are outlined below:

I. PUBLIC SECTOR-LED - NATIONAL AFFORESTATION/REFORESTATION PROGRAMME (NAP)

a. Youth in Afforestation/Reforestation Project (YAP)

The Youth in Afforestation/Reforestation Project (YAP) is a government-funded landscape restoration intervention that involves the engagement of predominantly young people as beneficiaries to undertake rehabilitation of degraded and deforested landscapes nationwide and also support forest protection and management.

Implementation of the project commenced in April 2018 with an initial engagement of about 50,000 beneficiaries. However, there has been reduction in the number of beneficiaries over the past four years as a result of resignations.

The total number of beneficiaries as at the end of 2023 was approximately 8,000. The planting activities undertaken by the YAP beneficiaries in 2023 include amenity planting, watershed planting, Taungya, establishment of model plantations, direct planting, enrichment planting and nurturing of seedlings. The beneficiaries also supported with the maintenance of existing plantations, forest protection and stock survey activities of natural forest timber. A total area of **575.5 ha** of forest plantations was established during the reporting period under the YAP.

b. Modified Taungya System (MTS)

The MTS involves the establishment of forest plantations in degraded forest

reserves by the Forest Services Division (FSD) in partnership with farmers from forest fringe communities. A distinctive feature of MTS is the defined roles and benefit sharing agreements between the Government, farmer groups, land owners and local communities. The farmer group provides labour for planting activities while the FSD supervises and provides the required logistics including tree seedlings. The farmer group is permitted to cultivate food crops alongside the planted trees on the same piece of land for a period of three (3) years. The farmer group, in addition to the food crops, have a 40% share in the Standing Tree Value (STV) of the planted trees. The Government has a 40% share while the landowner and community have a 15% and 5% share, respectively.

The MTS accounted for **10,072.8 ha** of forest plantations established in 2023. The breakdown of the MTS achievements is as follows:

- i. A total area of **5,032.2 ha** established nationwide under the government-led MTS approach involving partnership between FSD and the farmers;
- ii. An area of **2,900.7 ha** established under the Ghana Shea Landscape Emission Reductions Project (GSLERP) being implemented in the five (5) regions of northern savanna zone (North East, Northern, Savannah, Upper East and Upper West).
- iii. An area of **2,103.2 ha** established with tree seedlings supplied during Green Ghana Day.
- iv. An area of **36.7 ha** established under the Ghana Landscape Restoration and Small-Scale Mining Project

c. Ghana Shea Landscape Emission Reductions Project (GSLERP)

The Ghana Shea Landscape Emission Reductions Project (GSLERP) was developed jointly by the Forestry Commission and UNDP, and approved by the Green Climate Fund in August 2020.

The project has an estimated budget of USD 30.1 million, with a total of USD 24.4 million co-financing from the Government of Ghana and the Private Sector. The key objectives of the GSLERP are to achieve climate mitigation of 6.135 mtCO₂e over the 7 years of the project, and mitigation beyond this timeframe up to 20 years of 25.24 mtCO₂e.

This will be realised through reduced emissions and enhanced removals from productive, sustainably managed savannah forests, Shea landscapes, and forest plantations.

Furthermore, the project aims to generate revenues for local communities and community members, especially women, and their public and private sector partners, providing strong incentives for the profitable and sustainable management of forests, plantations, and Shea landscapes. During the reporting period, a total of **2,900.7 ha** was planted using the MTS approach.

d. Ghana Landscape Restoration and Small-Scale Mining Project (GLRSSMP)

The Ghana Landscape Restoration and Small-Scale Mining Project, which commenced in 2022, is a 6-year programme being implemented in

Twenty-six rural districts in the northern savannah, transitional and high forest zones.

The core objective of the GLRSSMP is to strengthen integrated landscape management, formalization of artisanal small-scale mining and increase benefits to communities in the targeted degraded savannah and cocoa forest areas. The project is being implemented through the following components:

1. Institutional strengthening of governance and partnerships for participatory landscape management;
2. Regulatory strengthening and formalization of artisanal small-scale mining;
3. Sustainable crop and forest landscape management;
4. Monitoring of Project and Knowledge Management; and
5. Contingency Emergency response.

A total area of **592.8 ha** was reported established under the project in 2023. The forest plantations established under the project include: **36.7 ha** of MTS; **250.5 ha** of watershed planting; **187.8 ha** of Green firebreaks; and **117.8 ha** of woodlots.

Fig. 1: Teak stand established under GLRSSMP at Adukrom off-reserve site in Donkorkrom Forest District, Eastern Region

Fig. 2: One-month old Cedrela stand planted under MTS in the Southern Scarp Forest Reserve, Begoro Forest District - Eastern Region

II. PRIVATE SECTOR-LED COMMERCIAL FOREST PLANTATION DEVELOPMENT INITIATIVES

During the reporting period, the private sector established a total area of 4,328.1 ha under two categories of Public-Private Participation (PPP) models, as detailed below:

a. Public-Private Participation Model (Benefit Sharing Category 1):

The PPP approach involves the allocation of degraded forest reserve lands by the Forestry Commission (FC) to private entities after their reforestation plans have been vetted and approved by the FC and their Land Lease and Benefit Sharing Agreements subsequently signed by the major stakeholders.

The FC undertakes monitoring of the operations of the private entities to ensure compliance with the terms and conditions of the Agreements and the approved Reforestation Plans. Under this arrangement, the private investor earns 90% of the Standing Tree Value (STV) of the plantation whereas the remaining 10% is shared as follows - FC (2%), Landowner (6%) and Local Community (2%).

In addition, the investor pays an annual ground rent of the Ghana Cedi equivalent of \$2 per hectare for the total allocated area over the lease period.

An area of **2,048.3 ha** was reported established in 2023 under this sub-component.

b. Public-Private Participation Model (Benefit Sharing Category 2):

This category involves the release of degraded forest reserve lands to private entities. However, the FC has responsibility for additional activities including: survey and demarcation; pillaring; registration of Land Lease and Benefit Sharing Agreements; community fire education; and provision of support towards fire-fighting. Similar to the Benefit Sharing Category 1 approach, FC also undertakes monitoring of the plantation development operations.

The private investor is entitled to 80% of the STV of the plantation whereas the FC receives 12%, the Landowner (6%) and Local Community (2%).

The investor pays ground rent at a rate of the Ghana Cedi equivalent of \$2 per hectare per year. In addition, the

investor pays an annual fee of the Ghana Cedi equivalent of \$2 per hectare as Landowner Facilitation Fee and a one-off payment of the Ghana Cedi equivalent of \$7 (negotiable) per hectare to the landowner as “Customary Drink Money”. An area of **2,279.8 ha** was developed using this approach during the reporting period.

2.1.1.1 Establishment of Forest Plantations in Degraded Forest Reserves and Off-Reserve Areas

Out of the total area of 16,941.5 ha of forest plantations established in 2023, **16,732.3 ha** was established within degraded forest reserves (Table 3) whereas the remaining **209.2 ha** was established within off-reserve areas (Table 4). Going forward, it would be necessary to design an effective monitoring system at the level of the forest district to capture information on off-reserve forest plantations.

Table 3: Forest Plantations Established within degraded Forest Reserves in 2023

| COMPONENT | UNIT | YAP | FC / COLL. | YFPEP | GSLERP | GLRSSMP | GREEN GHANA | PPP (BS1) | PPP (BS2) | TOTAL (ha) |
|-------------------------|------|--------------|----------------|-------------|----------------|--------------|----------------|----------------|----------------|-----------------|
| Direct Planting | ha | 472.9 | | 46.3 | | | 991.5 | 2,048.3 | 2,279.8 | 5,838.8 |
| Modified Taungya System | ha | | 5,032.2 | | 2,900.7 | 36.7 | 2,103.2 | | | 10,072.8 |
| Taungya | ha | 28.6 | | | | | 7.0 | | | 35.6 |

| Green Firebreak | ha | | | | | 187.8 | 70.45 | | | 258.3 |
| Total | | 516.5 | 5,032.2 | 46.3 | 2,900.7 | 475.0 | 3,433.5 | 2,048.3 | 2,279.8 | 16,732.3 |

Table 4: Forest Plantations Established within Off-Reserve in 2023

| COMPONENT | UNIT | YAP | SAPIP | BPA | GLRSSMP | VRA | TOTAL |
|--------------------------|------|-------------|-------------|------------|--------------|-------------|--------------|
| Direct Planting | ha | 36.9 | 13.0 | 4.4 | | | 54.3 |
| Amenity/ Avenue planting | ha | 11.9 | | | | | 11.9 |
| Watershed planting | ha | 10.2 | | | | 15 | 25.2 |
| Woodlots | ha | | | | 117.8 | | 117.8 |
| Total | | 59.0 | 13.0 | 4.4 | 117.8 | 15.0 | 209.2 |

2.1.1.2 Regional Breakdown of Forest Plantation Development Achievements – 2023

Ashanti Region achieved the highest forest plantation establishment in 2023, accounting for 39% of the total area established.

See Table 5 and Figure 3 for details.

Table 5: Regional Breakdown of Forest Plantations Established in 2023

| Region | Area Established (ha) |
|---------------|-----------------------|
| Ahafo | 975.1 |
| Ashanti | 6,620.7 |
| Bono | 1,260.1 |
| Bono East | 354.9 |
| Central | 888.2 |
| Eastern | 1,336.4 |
| Greater Accra | 50.7 |
| North East | 535.8 |
| Northern | 432.5 |
| Oti | 94.5 |
| Savannah | 780.0 |
| Upper East | 730.5 |
| Upper West | 1,057.8 |
| Volta | 34.2 |
| Western | 267.5 |
| Western North | 1,522.6 |
| Total | 16,941.5 |

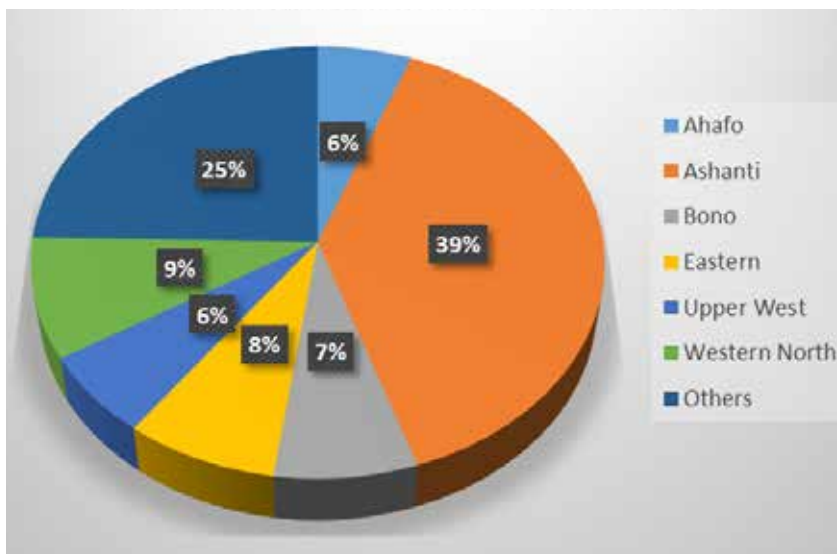

Fig. 3: Regional Breakdown of Area Established (%)

2.1.2 Green Ghana Day Initiative

The third edition of Green Ghana Day (GGD) Initiative was commemorated on 9th June, 2023 under the theme: ‘Our Forests, Our Health’.

The GGD was introduced by H. E. Nana Addo Dankwa Akufo-Addo in 2021 as part of the government’s strategy to restore degraded lands and encourage the citizenry to actively partake in tree planting initiatives for its manifold benefits.

During the GGD, tree seedlings are distributed freely to the general public for planting to meet a set ambitious national target. In 2023, the target for Green Ghana Day was to plant 10 million tree seedlings.

2.1.2.1 Objectives of Green Ghana Day

The Green Ghana Day initiative seeks to achieve the following objectives:

1. Create enhanced national awareness on the necessity for collective action towards restoration of degraded landscapes in the country;
2. Inculcate the values of planting and nurturing trees and its associated benefits in the youth;
3. Contribute to climate change mitigation;
4. Beautify our communities and environment
5. Enhance livelihoods for rural communities through their engagement in the production of tree seedlings; and

2.1.2.2 Implementation Committee

The National Green Ghana Day Planning Committee and the four (4) multi-sectoral sub-committees (Logistics & Operations; Media & Publicity; Finance & Fund raising; and Monitoring & Reporting) inaugurated by the Hon. Minister for Lands and Natural Resources in April, 2021, continued with their mandate of providing oversight responsibility for the effective implementation of the 2023 edition of Green Ghana Day. The Committee was chaired by Hon. Benito Owusu Bio, Deputy Minister for Lands and Natural Resources.

2.1.2.3 Strategic Partnerships with Stakeholders

The third edition of GGD also received massive endorsement and partnership of various stakeholders. These stakeholders included Traditional Authorities, various government agencies, the diplomatic

corps, churches, educational institutions, private commercial forest plantation developers, other private corporate entities, amongst others. The support offered by these stakeholders included mobilizing their workforce and/ or members to actively partake in the GGD activities, financial contribution towards the purchase of seedlings by FC and announcement of tree planting pledges to enable the Government to meet the set target for the 2023 edition of the GGD.

Various corporate entities including Total Energies PLC, KPMG, Chamber of Bulk Oil Distributors, Guinness Ghana Limited, New Star Ghana Limited and Prudential Bank adopted degraded sites within the Chipa Forest Reserve and provide the financial support for restoration of the degraded sites. In addition, the International Union for Conservation of Nature established a five-hectare forest plantation in a degraded portion of the Ambalara Forest Reserve in the Lawra Forest District whiles Karpowership Ghana Limited also established a three-hectare forest plantation in a degraded portion of the Subri River Forest Reserve as their contribution to the 2023 edition of Green Ghana Day (see Appendix II for details).

2.1.2.4 Field Visits and Media Engagements Prior to GGD

As part of preparations towards the 2023 Green Ghana Day, a series of field visits were undertaken by the Hon. Minister and Deputy Ministers for the Ministry of Lands & Natural Resources as well as the Executive Management Team and Senior Managers of the Forestry Commission.

The visits were undertaken to assess the level of preparedness of FC offices and other stakeholders for Green Ghana Day and also support with awareness creation campaigns for the 2023 edition of Green Ghana Day.

In addition, various media engagements were undertaken prior to the 2023 edition of Green Ghana Day. The Hon. Minister, Deputy Ministers and Senior Management of the Forestry Commission visited media houses including UTV, GTV, TV3, Peace FM etc. to sensitise the General Public on the objectives of Green Ghana Day and also encourage the citizenry to actively partake in the Green Ghana Day Activities by picking up seedlings at the designated points and planting them during the Day.

2.1.2.5 Planting Phase

During the 2023 edition of GGD, a total of **11,515,108 seedlings** was distributed out of which **10,704,897 seedlings** were confirmed planted. The seedlings planted include timber, fruit, ornamental, shade and multipurpose tree species. Due to erratic rainfall in the northern savannah zone prior to and during GGD, planting efforts were concentrated on the southern sector of the country to take advantage of the rains.

The table below shows the respective regional planting targets, the number of seedlings distributed, number of seedlings verified planted and planting achievement in terms of percentage during the 2023 edition of the GGD.

Table 6: Regional Breakdown of 2023 Green Ghana Day Planting Achievement

| S. N | Region | Target | Distributed | Verified Planted | Remarks (Achievement) |
|--------------|---------------|-------------------|-------------------|-------------------|-----------------------|
| 1 | Ahafo | 900,000 | 948,717 | 939,803 | 104% |
| 2 | Ashanti | 2,300,000 | 3,132,408 | 3,117,564 | 136% |
| 3 | Bono | 800,000 | 1,129,924 | 1,066,625 | 133% |
| 4 | Bono East | 150,000 | 198,175 | 190,761 | 127% |
| 5 | Central | 800,000 | 1,340,793 | 1,333,508 | 167% |
| 6 | Eastern | 900,000 | 1,396,563 | 1,333,020 | 148% |
| 7 | Greater Accra | 700,000 | 683,766 | 682,546 | 98% |
| 8 | Northern | 400,000 | 15,447 | 10,000 | 2.5 % |
| 9 | North East | 350,000 | 66,462 | 44,055 | 13% |
| 10 | Oti | 100,000 | 127,713 | 127,650 | 128% |
| 11 | Savannah | 400,000 | 124,992 | 124,870 | 31.2% |
| 12 | Upper East | 400,000 | 186,906 | 81,289 | 20.3% |
| 13 | Upper West | 400,000 | 486,135 | 147,440 | 36% |
| 14 | Volta | 100,000 | 199,445 | 129,993 | 130% |
| 15 | Western | 200,000 | 227,293 | 203,113 | 102% |
| 16 | Western North | 1,100,000 | 1,250,369 | 1,172,655 | 107% |
| Total | | 10,000,000 | 11,515,108 | 10,704,897 | 107% |

2.1.2.6 Post-Planting Phase

The Chief Executive of the Forestry Commission constituted field teams to undertake a nationwide assessment of the survival of the planted seedlings.

The survival survey was undertaken nationwide in August 2023, with a total of **4,272,340 seedlings** sampled for inspection. Out of the trees inspected, a total of **3,497,864 seedlings** had survived at the time of the field inspection, representing a survival percentage of **81.9**.

2.1.3 Maintenance/Rehabilitation of Existing Plantations

During the reporting period, various

maintenance activities were undertaken within existing plantations to ensure optimal growth and yield. Maintenance and forest protection activities undertaken in forest plantations include weeding, pruning, thinning, as well as protection of the plantations from wildfire, pests and diseases. In addition, severely burnt/ disturbed forest plantations were also rehabilitated through extensive beating-up.

A total area of **50,600.9 ha** of forest plantations was maintained in 2023. The maintenance activities were undertaken within forest plantations established under the following planting components outlined in Table 7:

Table 7: Maintenance activities undertaken in 2023 under different planting components

| COMPONENT/PROJECT | AREA MAINTAINED (ha) |
|---|----------------------|
| 1. Youth in Afforestation/ Reforestation Project. | 1,770.3 |
| 2. MTS (FC) | 10,020.9 |
| 3. Ghana Landscape Restoration and Small-Scale Mining Project | 680.3 |
| 4. Reforestation Offset-Project by Newmont Golden Ridge Limited | 317.0 |
| 5. Private Plantation Developers | 34,914.0 |
| 6. FC-Timber Industry Plantations | 2,289.2 |
| 7. Green Ghana | 258.0 |
| 8. GSLERP | 351.2 |
| TOTAL | 50,600.9 |

Although a target of 3,000 ha was set for coppice management, no contract was signed for the activity, therefore no achievement was recorded under the activity.

by planting high value indigenous timber species to enhance the recovery of degraded forests and thereby ensure the sustainable supply of forest goods and services.

2.2 Enrichment Planting

Enrichment planting is being implemented within poorly stocked/ degraded forests

A total area of 1,200 ha of poorly stocked/ convalescence areas within forest reserves was targeted for restoration through Enrichment Planting in 2023.

During the reporting period, **2,387.3 ha** of enrichment planting was undertaken under various interventions.:

Table 8: Breakdown of Enrichment Planting undertaken in 2023 under various interventions

| PROJECT | FOREST DISTRICT | AREA (ha) |
|------------------|-----------------|----------------|
| GLRSSMP | Nkawie | 314.0 |
| | Bekwai | 320.5 |
| | Mpraeso | 499.5 |
| | Akim Oda | 390.0 |
| Sub-total | | 1,524.0 |
| GREEN GHANA | Dormaa | 24.0 |
| | Enchi | 237.0 |
| | Asankragwa | 128.0 |
| sub-total | | 389.0 |
| YAP | Assin Fosu | 161.0 |
| | Asankragwa | 144.0 |
| | Tarkwa | 16.0 |
| | Kyebi | 32.0 |
| | Begoro | 120.0 |
| | Amasaman | 1.3 |
| Sub-total | | 474.3 |
| TOTAL | | 2,387.3 |

2.3 Trees-on-farm/Farm Forestry

The Trees-on-farm intervention is intended to improve the carbon density, biodiversity and sustainability of farming systems through the incorporation of appropriate forest trees.

Under this intervention, 5 million seedlings were targeted to be provided for planting, covering a total estimated farm area of 150,000 ha annually.

However, for the year under review, a target of 1 million seedlings was set for distribution and planting to cover an estimated area of 30,000 ha.

During the reporting period, the Forestry Commission distributed **651,638 tree seedlings** to farmers for incorporation in their farms covering **24,071.6 ha**.

3.0 FOREST PLANTATION INVESTMENT PROMOTION

3.1 Benefits and Incentives for Investors

The incentives provided by the Government of Ghana within its legal and administrative functions include: exemptions from taxes, levies and fees relating to equipment or parts of machinery that are not zero rated ; grants and loans from FPDFMB, and incentives for research and development. Other incentives include facilitation of the processes for the acquisition of phytosanitary certificate for importation of seeds for forest plantation development, acquisition of visa-on-arrival for foreign partners/ staff, registration of land lease agreements and entry into communities.

The beneficiary companies include Ecoplanet Bamboo WAI LLC, Ecoplanet Bamboo WAI LLC and Rainforest Builder Ghana Limited.

During the year under review, a total of three (3) Land Lease and Benefit Sharing Agreements (LLA & BSA) were signed with three (3) companies to undertake commercial forest plantation development covering a total area of 4,147.77 ha within degraded forest reserves.

Additionally, the total number of Social Responsibility Agreements signed was 156 with a value of GH¢608,401.49 involving 133 forest fringe communities within the Ahafo, Ashanti, Bono, Bono East, Central, Eastern, Oti, Volta and Western North Regions of the country.

Also, a total amount of GH¢8,037,352.13 was disbursed by the FC from forest plantation timber revenue to MTS beneficiaries consisting of Taungya Farmers, Traditional Council, Stooland

owners and Forest-fringe Communities.

Twenty-two (22) entities were granted access to develop commercial forest plantations within 3,712 ha degraded areas in forest reserves.

To date a total of 382 companies and individuals have been allocated a total of 170,896.97 ha to undertake forest commercial plantation development within degraded forest reserves (see Appendix I).

The FC, representing the GoG negotiated and signed LLA & BSA with Rainforest Builder Ghana Limited to undertake a biodiversity project on-reserve using solely indigenous tree species (Framework Species Method) in Ghana with carbon as a key output.

Under the Ghana Forest Investment Programme (GFIP), processes were initiated for the disbursement of US\$7,000,000.00 loan facility to support the establishment and management of private forest plantations.

Three (3) meetings were held at the Forestry Commission Training Centre (FCTC), Akyawkrom near Kumasi to create awareness and educate the plantation developers on the requirements for accessing the loan.

The Forest Plantation Investor Forum (FPIF) held a series of meetings to discuss the modalities for establishing a sustainable financing framework for the FPIF's training and advocacy activities and also develop a position paper for consideration by the FPTSC on the review of the GFPS.

¹ Section 14(A)-(J) of the Timber Resources Management (Amendment) Act, 2002 (ACT 617).

The major issues proposed in the position paper include:

- a. Modalities for the setup of an Insurance Package for investors where the assets of the investor (particularly almost matured plantations) could be used as a collateral/ bond by the investor to secure funds during period of low commodity prices to allow for sale of the timber products at a later date when the global prices normalize.
- b. Ensuring a secure off-taker of timber products from plantations;
- c. Increased and well-structured opportunities for leasing of equipment/ machinery for forest plantation development. The government could facilitate the set-up of three (3) centres nationwide in strategic locations where critical equipment/ machinery for commercial forest plantation development could be leased by developers at commercially competitive rates;
- d. Encourage private investors to incorporate NTFPs e.g. Vanilla, apiculture etc. within their plantations and also develop off-taker arrangements to ensure access to intermediate income by the developers before commercial thinnings/ harvesting;
- e. Institutional arrangements to facilitate access to high quality germplasm should be well-defined; and
- f. Necessity for the passage of the Forest Plantations Act.

4.0 EMPLOYMENT CREATION AND SUSTAINABLE LIVELIHOODS

4.1 Job Creation and Livelihood Enhancement

Job creation plays a crucial role in reducing poverty, aligning closely with the primary aim of Strategic Objective Three (3) of the GFPS. An estimated total

of 80,887 jobs were created nationwide during the year under review. A summary of jobs created under the various planting modules for 2023 is presented in Table 9 below. Additionally, temporary jobs were created through harvesting operations, transportation and construction.

Table 9: Jobs created - Plantation Establishment and Maintenance for 2023

| Intervention | Type of Job | Total No. of Jobs in 2023 | Gender | |
|---------------------|-----------------------|---------------------------|---------------|----------------|
| | | | No. of Males | No. of Females |
| FC/YAP | Contract | 11,763 | 8,589 | 3,174 |
| FIP | Temporary/ Contract | 1,297 | 715 | 582 |
| MTS | Temporary (3 - 4 yrs) | 27,725 | 15,107 | 12,618 |
| Private Developers | Full-Time | 8,766 | 5,704 | 3,062 |
| GSLERP | Temporary/Contract | 3,484 | 2,449 | 1,035 |
| GLRSSMP | Temporary/Seasonal | 2,768 | 2,008 | 760 |
| Trees-on-farms | Temporary/Seasonal | 20,242 | 11,219 | 9,023 |
| Seedling production | Temporary | 4,842 | 3,018 | 1,824 |
| Total | | 80,887 | 48,809 | 32,078 |

For the various planting modules under the National Afforestation/Reforestation Programme (NAP) including Youth in Afforestation/Reforestation Programme (YAP), Modified Taungya System (MTS), among others, a total of 7,922,130 tree seedlings was produced from FSD central nurseries in 2023. Appendix III provides details on the seedlings raised from FSD Central Nurseries.

2020, 2021, 2022 and 2023 coupes under the Modified Taungya System and other Taungya modules.

Table 10 provides details on the food stuffs produced on a regional basis. Additionally, a breakdown of the various food stuffs and their quantities produced in 2023 is presented in Appendix IV.

4.2 Food Crop Production

In 2023, an estimated total of 48,460.6 tonnes (t) of food crops was produced from forest plantations within sites in the

Table 10: Regional Breakdown of Food Crops Produced

| REGION | PLANTAIN (t) | CEREALS (Maize, Millet, Rice) (t) | TUBERS (Cocoyam, Cassava, Yam) (t) | LEGUMES (Beans, Cowpea, Groundnut, Sorghum) (t) | VEGETABLES (Tomato, Pepper, Garden Eggs) (t) | TOTAL FOOD PRODUCTION (t) |

Fig. 4: Plantain (left) and Pepper (right) produced from The Apostolic Church - Ghana's reforestation area within the Bandai Hills Forest Reserve in the Juaso Forest District, Ashanti Region

4.3 Post Project (ARF NWO-WOTRO) Monitoring of NTFPs Production

Two hundred (200) cups of Black Pepper produced by famers in Akwaboraso MTS plantations in the Nkawie Forest District were processed and packaged. Additionally, twenty packs of powdered black pepper were sold.

A total of 32 litres of honey from the ten (10) hives mounted under the Teak plantation in Jimira research plots were harvested, processed and sold. Two hundred (200) trial seedlings of Grains of Paradise were established under shade at the Mesewam Nursery with a 100% survival.

4.4 Wildfire

The threat of wildfire within forest reserves remain a major challenge to forest plantations development in Ghana. During the reporting year, a total area of 4,166.4 ha was affected by wildfires. This area represents a 68% decrease over the 2022 season.

Figure 6 shows the nationwide trend of wildfire incidences as reported from 2019 to 2023. The regional breakdown of fire occurrences within plantations in forest reserves is been presented in Table 11.

Fig. 5: Incidence of wildfire in portions of Teak plantations in the Opro River Forest Reserve, Offinso Forest District

Table 11: Regional Summary - Extent of Wildfire outbreaks

| REGION | TOTAL AREA AFFECTED BY WILDFIRE (ha) |
|---------------|--------------------------------------|
| Ahafo | - |
| Ashanti | 1,372.4 |
| Bono East | 257.4 |
| Bono | 612.0 |
| Central | 8.0 |
| Eastern | 265.2 |
| Greater Accra | 22.6 |

| Western North | - |
| Western | 2.5 |
| TOTAL | 4,166.4 |

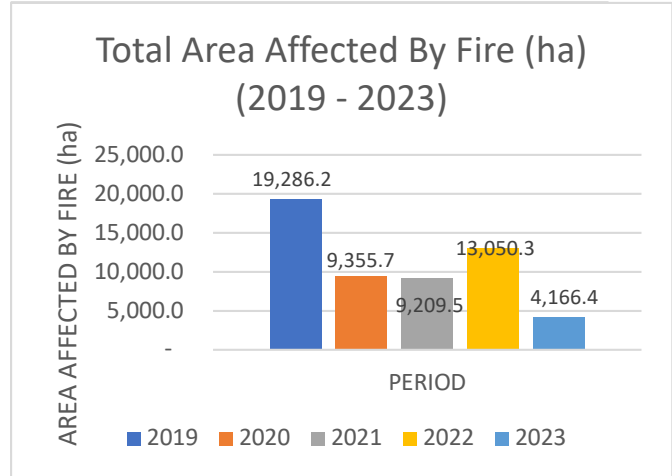

Fig. 6: Trends in reported cases of fire from 2019 to 2023

The following activities were carried out by field officers to control wildfires across the country:

- I. Awareness creation and sensitization of forest fringe communities and other stakeholders on fire prevention, control and suppression
- II. Ride Construction/Maintenance
- III. Establishment of green firebreaks
- IV. Fire patrols by community fire volunteers, forest guards and YAP beneficiaries

5.0 INVESTMENT IN RESEARCH AND DEVELOPMENT, EXTENSION, TRAINING AND CAPACITY BUILDING

5.1 Research and Development

5.1.2 Permanent and Temporary Sample Plots

5.1.1 Genetic Improvement of forest plantation species

Two major large-scale private forest plantation developers under the PPP module, FORM Ghana Limited and Miro Forestry (Ghana) Limited, collected data on tree growth and spacing within the PSPs in their reforestation areas in the Ashanti and Bono Regions.

Tree diameter, height and crown size were the parameters measured.

During the year under review, re-measurement of Six (6) PSPs in 3 ecological zones, specifically, Dry Semi Deciduous (Fire Zone), Moist Evergreen, and Moist-semi deciduous (NW Subtype), was undertaken. Except for the Offinso Forest District, where two re-measurements were conducted, all others had one re-measurement undertaken. Detailed analysis will be conducted upon the collection of adequate amounts of data. Table 12 below provides details on the re-measured PSPs.

Table 12: Re-measurement of PSPs for 2023

| Forest District | Ecological Zone | Forest Reserve | Compt. | Species | Year planted | No. of Plots | Plot Dimension (m) | PSP Established Year | Planting Distance (m) |
|-----------------|-----------------------------------|------------------|--------|---------|--------------|--------------|--------------------|----------------------|-----------------------|
| Sefwi Wiawso | Moist Evergreen | Suhuma | 6 | Wawa | 2016 | 1 | 60 × 60 | June 2020 | 10 × 10 |
| | | Sui | 53 | Cedrela | 2016 | 1 | 60 × 60 | June 2020 | 3 × 3 |
| Juaboso | Moist-semi Deciduous (NW Subtype) | Krokosua | 283 | Gmelina | 2016 | 1 | 60 × 60 | June 2020 | 3 × 3 |
| | | | 40 | Cedrela | 2013 | 1 | 60 × 60 | June 2020 | 3 × 3 |
| Offinso | Dry-Semi Deciduous (Fire Zone) | Afram Headwaters | 7 | Gmelina | 2017 | 1 | 100 × 100 | 2019 | 3 × 3 |
| | Dry-Semi Deciduous (Inner Zone) | Opro River | 70 | Teak | 2009 | 1 | 100 × 100 | 2019 | 3 × 3 |

5.1.2.1 Establishment of Experimental Plots

Data collection within the ten (10) PSPs at the Newmont Golden Ridge Limited's (NGRL) Reforestation Offset Project sites in the Kwekaru Forest Reserve and Maman off-reserve continued unabated. Tree growth and survival surveys were conducted to assess the performance of the stands. Table 13 provides an updated summary of the measurement taken from the PSPs since establishment.

Table 13: Tree Survival and growth dynamics in NGRL's Reforestation Offset Project site

| COUPES | YEAR | AVERAGE DBH (cm) | SURVIVAL (%) |
|---------------|-------------|-------------------------|---------------------|
| 2016 | 2017 | 4.21 | 82 |
| | 2018 | 8.43 | 90 |
| | 2019 | 10.91 | 89 |
| | 2020 | 11.94 | 88 |
| | 2021 | 13.13 | 88 |
| | 2022 | 14.22 | 88 |

5.2. Training and Roll Out of the Tree Registration Software (T'regis)

Following the successful training-of-trainers (ToT) programme supported by IDH in the previous year, the Tree Registration software has been updated and 100 FC frontline staff trained on the use of the software in the reporting year. Furthermore, the development of the Tree Registration Manual has been completed. Subsequently, with the support of IDH, a meeting was held with the Swiss Ambassador at the RMSC premises to discuss the tree registration programme and funding opportunities.

Forty-five (45) farmers of Rainforest Alliance together with 120 NGOs were trained in Bibiani and Sefwi Wiawso on the Registration of Trees and Verification under the Landscapes and Environmental Agility across the Nation (LEAN) project. Additionally, a 2-day tree registration training session, sponsored by IDH, was organized for forty (40) participants including farmers from Touton Ghana, IDH and FSD Tarkwa Forest District at the Hotel de Hilda in Tarkwa.

5.3 FC/TIMBER INDUSTRY DELEGATION VISIT INDIA AND VIETNAM

This section presents an overview of observations made by a joint team of private sector and Forestry Commission on a fact-finding trade mission to India and Vietnam respectively. The trade mission had the following objectives:

1. To seek collaboration with the private sector on the possible investment opportunities in the Ghana timber industry sector as well as seek technical collaboration for the Ghana wood sector for purposes of value addition.

2. To exchange information / experience on general wood industry development and potential cooperation between Ghana and the two countries (India and Vietnam) in wood / forestry sectors

3. To gather first-hand information on the conversion of some of the imported Ghana hardwood timber into various products and evidence some of these products in service.

4. To acquaint ourselves with how India and Vietnam Forest industry has travelled from primary and secondary processes to a more innovative value addition industry of international repute.

5. To facilitate business to business opportunities between the Ghana private sector and private sector of the two nations.

The delegation comprised Dr. M. Nurudeen, Mr. Kwame Agyei, Dr. Joseph Boakye from the Forestry Commission of Ghana; and Mr. Richard Nsenkyire, Mr. George Wireko-Brobby, Nana Dwomoh Sarpong, Mr. Daniel Kwasi Asante and Mr. Kwame Addo Kuffour who represented the private sector.

The mission to India was undertaken from 16th - 21st July, 2023. During the Indian trade mission, the delegation visited nine (9) wood processing factories in Kandla and Gandhidham, India as detailed below:

- I. Vibrant Exim Pvt. Limited
- II. Shree Maruti Enterprise
- III. Shyam Timber/ Vandana Timber Pvt. Limited
- IV. Organic Wood Limited
- V. Oswal Lumber Pvt. Limited
- VI. Deekay Pine Board Pvt. Limited
- VII. Parekh Timber Limited
- VIII. Ramhans Industries
- IX. Jaypee Sawmill

The major observation made was that, Ghana Teak has premium quality especially with regards to density compared to Teak imports from South America.

However, it was observed and highlighted by many buyers that, teak wood/timber currently imported from Ghana did not have the required specifications (diameter and form) desired by the Indian market.

It was advised that in order for Ghana Teak to remain competitive and not lose the market share despite the desirable quality in density, Ghana needs to ensure that Teak plantations are mature before harvesting, with improved silvicultural practices in Teak stand management that gives priority to straight boles and optimal merchantable diameter.

Fig. 8: The delegation inspecting imported Teak billets from Ghana and clean square processed lumber imported from Brazil at Vibrant Exim PVT Limited.

Fig. 9: The delegation and representatives from Vibrant Exim PVT Ltd. discussing the observed differences in quality between Teak imports from Ghana and Latin America

Fig. 10: Inspection of processed Teak at Shree Maruti Enterprise

Fig. 11: Teak billets from Brazil at Shyam Timber/ Vandana Timber PVT Limited

Fig. 12: The delegation at Ramhans Industries PVT Limited

The team sought to learn how the Vietnamese timber industry had evolved from mainly secondary production of timber products, as pertains in Ghana currently, to such a multi-billion (\$16 Billion USD in 2022) industry in less than three decades. This started in 1995 when trade was first liberalised, following the lifting of USA trade embargo on Vietnam. The delegation met with trade associations, private sector operators, and visited mills and furniture production sites to learn at first-hand the industry's transformation over a short period of time.

Major observations made were that, the industry has a three-pronged approach to doing business.

- One is the government sector providing the enabling environment by way of working with the banking sector to provide very low interest rates on commercial loans that enable the industry to retool seamlessly.
- The second approach was raw material availability which has been made possible by intensive industrial plantation by the private sector of fast-growing species of mainly Acacia and Eucalyptus species of 5-6 years rotation for the furniture

Fig. 13: Latin America Processed Teak at Jaypee Sawmill

industry. Additionally, huge imports of tropical and temperate species from both the global south and north is an approach adopted to augment the raw material base.

- The third approach was the strong and vigorous trade association that work closely with processors and the government.

This three-pronged approach is what has made the Vietnamese industry such a global player. The trade mission to Vietnam was undertaken from 23rd - 28th July, 2023.

The agencies/ associations the delegation interacted with in Vietnam comprise the following:

- I. Department of Forestry, Ministry of Agriculture and Rural Development
- II. Handicraft and Wood Industry Association of Ho Chi Minh City (HAWA)
- III. AA Corporation
- IV. Binh Duong Furniture Association (BIFA)
- V. Lam Viet Joint Stock Company
- VI. Hiep Long Fine Furniture Company
- VII. Tavico Timber Company Limited
- VIII. Woodland Joint Stock Company.

6.0 GOVERNANCE

Governance, a crucial element in managing the forest landscape, was not compromised during the year under review.

Consequently, the development and oversight of forest plantations across the country involved a multi-stakeholder decision-making process. Numerous meetings were convened with various stakeholders, including MTS Farmer Groups, landowners and private plantation developers.

These discussions addressed issues concerning plantation forestry in Ghana under various planting modules.

6.1 Disbursement of Forest Plantation Timber Revenue to Key Stakeholders

During the year under review, a total amount of Gh¢15,519,486.59 was disbursed by the FC from forest plantation timber revenue and other related statutory and administrative payments to various stakeholders as shown in Table 14. Fifty-three (53) farmer groups and Forty-nine (49) local communities received Gh¢2,784,327.87 and Gh¢1,134,661.20 respectively being their share of revenue accrued from the sale of harvested plantation timber products from MTS stands in 2023, as detailed in Appendix V.

Table 14: Forest Plantation Revenue Disbursement for 2023

| Source of Revenue | Amount Disbursed (GH¢) | Beneficiaries/Stakeholders (GH¢) | | | |
|--|------------------------|----------------------------------|---------------------|---------------------|---------------------|
| | | MTS Groups | Landowners | Local Communities | MMDAs |
| MTS (Timber) | 7,074,782.24 | 2,784,327.87 | 1,061,214.63 | 353,791.80 | - |
| Ground Rent (Private Plantations On-Reserve) | 2,584,191.71 | - | 1,046,597.64 | - | 1,279,174.90 |
| Private Plantations (Timber) | 5,840,107.64 | - | 2,342,608.20 | 780,869.40 | - |
| Facilitation Fees | 20,405.00 | - | 20,405.00 | - | - |
| Total | 15,519,486.59 | 2,784,327.87 | 4,470,825.47 | 1,134,661.20 | 1,279,174.90 |

In 2023, a total of 156 Social Responsibility Agreements (SRAs) were signed with 133 communities in respect of plantation timber allocated for thinning/harvesting. This represents 24% decrease in the number of SRAs signed in 2023 compared to 2022 (205).

There was 16% decrease in the number of communities that benefited from SRA in 2023 as compared to that of 2022 (160). An amount of GH¢608,401.49 was paid upfront to the beneficiary communities by 97 companies in 2023 (Table 15).

Table 15: Regional Breakdown of Signed SRAs in 2023

| Region | No. of Companies | No. of SRAs Signed | No. of Beneficiaries/Communities | Amount Paid (Gh¢) |
|---------------|-------------------------|---------------------------|---|--------------------------|
| Ahafo | 5 | 7 | 5 | 13,077.78 |
| Ashanti | 56 | 104 | 78 | 446,815.73 |
| Bono | 6 | 7 | 7 | 7,787.78 |
| Bono East | 5 | 5 | 6 | 3,573.36 |
| Central | 1 | 1 | 2 | 452.72 |
| Eastern | 9 | 13 | 12 | 42,216.22 |
| Oti | 2 | 2 | 2 | 9,204.00 |
| Volta | 6 | 8 | 8 | 14,111.80 |
| Western | 1 | 1 | 4 | 997.75 |
| Western North | 6 | 8 | 8 | 70,164.35 |
| TOTAL | 97 | 156 | 133 | 608,401.49 |

7.0 Plantation Timber Production

This chapter presents details on the combined quantity of plantation timber harvested from both on-reserve and off-reserve stands during the reporting year.

7.1 Plantation Timber Production in 2023

A total volume of **285,188.9m³** of plantation timber was harvested in 2023 compared to 297,154.4m³ in 2022.

The extracted volume comprised 168,382.6m³ from on-reserve and the remaining 116,806.3m³ from off-reserve areas. The volume of plantation timber harvested on-reserve saw a significant increase from 2021 (104,498.5m³), 2022 (145,757.8m³) and 2023 (168,382.6m³). Plantation timber harvested off-reserve experienced a notable rise in volume; 99,493.4m³ (2021) and 151,396.6m³ (2022) but declined to 116,806.3m³ (2023).

Fig. 14: Wood processing into plywood at Miro Forestry (Gh) Limited's Plymill at Drobonso in the Kumawu Forest District, Ashanti Region

Fig. 15: Joint FSD/TIDD/RMSC team undertaking log measurements within the Boumfum Forest Reserve to develop tree volume - weight conversion factors of plantation tree species to facilitate volume determination using the Miro Forestry (Gh) Ltd.'s Weighbridge near Drobonso in the Kumawu Forest District, Ashanti Region

The details of on-reserve plantation timber production in 2023 have been provided in Table 16. Out of the total volume harvested on-reserve, Teak contributed 51.6% of total harvested volume, Eucalyptus (14.6%), Cedrela (11.0%), Gmelina (9.6%), and other species (13.2%).

No plantation timber harvesting operation on-reserve was undertaken in the Greater Accra, Northern, Savannah, Upper East and Upper West Regions.

Table 16: Volume of Plantation Timber (m³) harvested On-reserve in 2023

| ON-RESERVE | | | | | | |
|-------------------|---------------------|-----------------|-----------------|--------------------------|-----------------|------------------------------|
| REGION | TREE SEPCIES | | | | | TOTAL (m³) |
| | TEAK | CEDRELA | GMELINA | EUCALYPUS SPECIES | OTHERS | |
| Ahafo | 4,121.0 | - | - | - | 1,806.7 | 5,927.7 |
| Ashanti | 50,926.4 | 13,097.5 | 15,549.1 | 24,543.3 | 19,441.9 | 123,558.1 |
| Bono | 15,875.2 | - | - | - | - | 15,875.2 |
| Bono East | 582.6 | - | - | - | - | 582.6 |

| TOTAL | 86,887.6 | 18,507.7 | 16,216.1 | 24,543.3 | 22,227.9 | 168,382.6 |

The total plantation timber harvested off-reserve in 2023 was 116,806.3 m³ as presented in Table 17. Teak was the main timber species harvested from off-reserve plantations contributing 99.8% with Pines representing 0.2% of total harvested volume. Cedrela and Gmelina were not

harvested off-reserve in 2023. There was no harvesting operation in the Greater Accra, North East, Savannah, Upper East and Western Regions. Comparatively, plantation timber harvested off-reserve was less than that of on-reserve in 2023 (a percentage difference of 44.2%).

Table 17: Volume of Plantation Timber (m³) harvested Off-reserve in 2023

7.2 Value Addition and Export of Forest Plantation Timber

Teak, Cedrela, Gmelina and Eucalyptus were the main plantation timber species exported. A large portion of these species were exported as primary or secondary wood products (mainly air-dried lumber, billets, kiln-dried lumber, plywood and logs) as shown in Table 18.

Table 18: Volume and Value of Products of the Major Exported Plantation Timber Species

| Species | Product | Volume (m ³) | Value (€) |
|------------------|------------------------|--------------------------|----------------------|
| Teak | Lumber Air Dried | 142,615.049 | 53,728,223.79 |
| Teak | Lumber Kiln Dried | 340.024 | 126,252.35 |

| Rubberwood | Lumber Kiln Dried | 585.909 | 107,836.13 |
| sub-total | | 1,760.577 | 323,638.90 |
| Acacia mangium | Plywood (Overland) | 95.514 | 58,504.80 |
| Acacia mangium | Kindling | 380.570 | 38,877.68 |
| sub-total | | 476.084 | 97,382.48 |
| Total | | 183,717.823 | 68,809,415.56 |

India remains the key export destination for Teak and Gmelina. Lumber (Kiln dried), Plywood, Plywood (Overland) and Processed L/ Mouldings make up the secondary wood products exported.

Proportion of Plantation Timber Exported Over The Last 15 Years (2009 – 2023)

Trend: Increasing importance of plantation grown timber over the past 15 years

Fig. 16: Relative Contribution of Forest Plantations to Total Export of Timber and Wood Products (2009 – 2023)

Figure 16 illustrates a consistent upward trend in the contribution of plantation timber to Ghana’s total timber and wood product exports over the past 15 years.

In 2023, plantation timber accounted for 63% of the total export volume, a 2-percentage point increase from 2022. Despite this growth in volume, its share of the total export value remained unchanged

at **51%**, amounting to €68,809,415.56 out of a total of €134,434,671.84.

This milestone is largely attributed to increased production of plantation timber, driven particularly by private sector players. Production from private commercial forest plantations is expected to continue increasing, further sustaining this positive trend.

8.0 FINANCE

The expenditure and revenue performance for investments in forest plantations during 2023 is presented by evincing the cost structures and revenue sources. In 2023, investments in the various forest plantation interventions were financed through Government of Ghana (GoG), private sector and donor funds. While the contribution of private sector finance in forest plantation development cannot be discounted, a partial expenditure analysis is provided with emphasis on only public expenses covering both GoG interventions and donor projects due to data accessibility at the time of reporting.

At the end of the 2023 planting season, public sector expenditure amounted to GH¢81,186,445.65. Out of this expenditure, the Government's share stood at GH¢59,074,168.30 representing 73%, whereas donor projects constituted GH¢22,112,277.35 being 27%. Major public sector cost centres included YAP, Green Ghana and general forest plantation establishment and management operations.

Revenue generated in 2023 from forest plantation production amounted to GH¢104,426,842.03 for both

on-reserve and off-reserve. A total of GH¢28,502,760.03 was generated from the sale of forest plantation timber harvested on-reserve. Specifically, this income was sourced from the sale of state-owned forest plantation stands in addition to revenue received by FC from private forest plantations and MTS stands which is subject to onward disbursement to relevant stakeholders.

Conversely, revenue from plantation timber off-reserve was estimated based on the sale of timber through private transactions outside the direct control of FC. Accordingly, FC's average age-class indexed standing timber prices were applied in estimating the value of forest plantation timber harvested off-reserve, though this may be well below the average market price. In effect, the revenue realised from forest plantations off-reserve was estimated to be GH¢75,924,082.00. Table 19 summarises the public sector expenditure and revenue accrued from on-reserve forest plantation timber over the period under review.

Table 19: Forest Plantation Expenditure and Revenue

| EXPENDITURE AND REVENUE ANALYSIS | | | | | |
|----------------------------------|---------------|-------------------------|---------------|---------------|---------------------|
| Expenditure (GH¢) | | Total Expenditure (GH¢) | Revenue (GH¢) | | Total Revenue (GH¢) |
| GoG | Projects | | On-Reserve | Off-Reserve | |
| 59,074,168.30 | 22,112,277.35 | 81,186,445.65 | 28,502,760.03 | 75,924,082.00 | 104,426,842.03 |

² Off-reserve revenues were estimated based on reported production volumes and average standing tree value. This represents estimated revenue from private plantations. It does not include other fees such as export levies and conveyance fees paid to the FC

9.0 CHALLENGES

The following challenges affected operational activities during the reporting period.

i. Public Sector:

1. Inadequate funding and logistics (vehicles, motorbikes, etc.) for monitoring and supervision of field operational activities;
2. Inadequate field staff to carry out effective supervision of MTS farmers and monitoring of plantation development, logging and harvesting operations;
3. Limited funds and logistics to prevent, control and suppress wildfires, usually intensified by activities of free-range cattle herders and illegal farmers within forest reserves;
4. Destruction of established plantations both on and off-reserve through illegal mining (galamsey) activities;
5. Lack of progress in the development of an appropriate legal regime for the establishment and management of forest plantations;
6. Undue delays in processing of Benefit Sharing Agreement (BSA) for MTS farmers is a disincentive for maintenance of the established forest plantations;
7. Inadequate funds to transport YAP beneficiaries to planting sites within forest reserves that are usually far away from their residences and;

8. Inadequate Unmanned Aerial Vehicles (drones) for forest surveillance, monitoring of field operations and mapping.

ii. Private Sector:

1. Resistance of illegal farmers to vacate sites allocated to private commercial plantation developers in forest reserves pose difficulties for plantation establishment by large scale developers;
2. Difficulties associated with the acquisition of secure land in off-reserve areas for forest plantation development as a result of other competing land uses, e.g., commercial agriculture, infrastructure development etc., and complexities with traditional land tenure arrangements;
3. Operational/ financial difficulties due to limited opportunities or inability of several private developers to access long-term capital for forest plantation development;
4. Persistent occurrence of annual wildfires, usually caused by activities of free-range cattle herders and illegal farmers and;
5. Delays in processing of timber harvesting permits which result in pilfering.

10.0 CONCLUSION AND WAY FORWARD

The reporting year represented the seventh year of the implementation of the GFPS. During the period, the GFPS has provided a robust framework for target setting for forest landscape restoration interventions in Ghana and tracking of benefits and costs associated with implementation of these interventions. The targets for forest plantation establishment for both 2021 and 2022 were however reduced as a result of a significant reduction in the number of beneficiaries under the Youth in Afforestation/Reforestation Project (YAP) which hitherto served as an important initiative to aid in the attainment of the public sector target.

A notable feature over the seventh-year period has been the consistent high performance of public sector in meeting its set targets under the GFPS through implementation of the National Afforestation/Reforestation Programme (NAP). On the contrary, the private sector has largely failed to meet its annual target in spite of the significantly lower target of 5,000 ha set for the reporting period.

In accordance with the lessons learnt during the first seven years of implementation of the GFPS, the following actions are deemed critical to further enhance implementation of forest landscape restoration interventions in Ghana:

1. Review of the GFPS

The first revision of the GFPS is scheduled to be undertaken in 2023. As stipulated in the GFPS, the document will be reviewed every 5 years from the date of commencement of implementation to take stock of progress and adapt the Strategy to changing conditions

and priorities and thereby ensure that the overarching goal of the Strategy is attained. It is therefore envisaged that the necessary measures will be put in place for a consultative review of the Strategy by the end of 2023.

2. Drafting and Promulgation of the Forest Plantations Act

The drafting of a Forest Plantations Act is a critical activity that should be prioritized for implementation. The objective of the Act would be to provide a solid legal basis for the regulation and development of forest plantations in Ghana by providing comprehensive guidance on the following relevant subjects;

- I. Allocation of degraded forest reserve land for private plantations on-reserve;
- II. Land Lease and Benefit Sharing Agreement/Arrangements;
- III. Allocation of Timber Rights from Government/FC forest plantations;
- IV. Chain of Custody for Plantation Timber;
- V. Timber price determination and revenue sharing for plantation timber from Government/ FC Plantations and Government-Private Sector Partnerships/ Collaborations;
- VI. Incentives and benefits for forest plantation investors;
- VII. Sustainable and innovative financing mechanisms for forest plantation development.

3. Performance Review of Private Sector Participation in Forest Plantation Development On-Reserve

Since the inception of the National Forest Plantation Development Programme in 2002, a number of private investors have been allocated degraded forest reserve compartments to undertake commercial forest plantation development. Some of the developers have performed creditably well and are desirous of further expanding their forest plantations.

However, the other developers have been underperforming. In accordance with the Land Lease and Benefit Sharing Agreements with the private developers, concerted efforts are therefore required to withdraw all lands allocated to non-performing private sector actors.

The withdrawn areas could be earmarked for planting under a government-led initiative or re-allocated to other performing private investors. Such an approach may further enhance the contribution of private investors to the GFPS planting targets.

4. Verification and Validation of Planted Sites

The Forestry Commission undertook field verification of areas planted under YAP and MTS in 2018.

The sites developed in 2019 were also partly verified. The verification exercise is therefore yet to be completed for 2019 and undertaken for all public plantations established from 2020 - 2023. The field verification of the planted sites serves a dual purpose of ensuring accurate reporting of area of forest plantations established and also provide spatial data of the stands.

5. Maintenance of Established Forest Plantations including Wildfire Control

Poor maintenance of established forest plantations contributes to low yields and consequently sub-optimal economic returns from these plantations.

The necessary incentives and logistics are therefore required to ensure effective maintenance of established forest plantations. Such measures will lead to reduction in wildfires within established plantations and also reduce susceptibility of the plantations to pest and diseases, and thereby enhance economic returns from the stands.

A photograph of a dirt path winding through a forest. The path is reddish-brown and covered with fallen leaves. Tall, thin trees with sparse foliage line the path. A semi-transparent white banner is overlaid across the middle of the image, containing the word "APPENDICES" in green, serif, all-caps font.

APPENDICES
